Online Reference Figure 1. Percentage of BOG and NOG Veterans with Positive Annual Earnings

Online Reference Figure 2. Data Diagram

Notes: Cell restrictions limit the sample to cells where all veterans have the same birth year (466 observations dropped), all veterans have start years between 1966 and 1971 (2,677 observations dropped), all veterans have loss years between 1968 and 1985 (4,681 observations dropped), and no veterans have a missing loss year (80 observations dropped).

2007	0.0093	0.0740	0.0084	0.0685	0.0093	0.0699	0.0083	0.0653
Not Deceased	0.9260	1.0000	0.9315	1.0000	0.9301	1.0000	0.9347	1.0000

Notes: This table reports the distribution of death years for BOG and NOG veterans conditional on being alive as of 1996. Veterans who were alive as of 2007 are recorded as "Not Deceased." The statistics reported in Panel A are from a sample based on all restrictions described in the data appendix, but includes veterans who did not verify with the SSA and veterans who died after 1995. Panel B further restricts the sample to veterans who verified with the SSA. Annual mortality rates indicate the percentage of veterans who died in the year indicated. Cumulative mortality rates indicate the percentage of veterans deceased as of the year indicated.

Online Reference Table 5. Mortality in the BOG versus NOG samples from 1996-2007
 DV: 100 x 1[Died in year t]

	A. Full Sample		B. SSA Verified Sample

Outcome Mean (1996)	0.395		0.346	
Outcome Mean (2007)	0.946		0.943	
# OBS (Indiv)x(Year)	16,198,016		15,281,960	

Notes: This table reports estimates of equations (1) and (2) where the dependent variable equals 100 the year a veteran dies and 0 otherwise. Both panels report estimates from a sample that drops veterans in years after their year of death. Thus, each veteran is recorded as deceased at most one time. Panel A includes veterans who did not verify with the SSA, but makes all other sample restrictions described in the data appendix (except mortality restrictions). Panel B only includes veterans who verified with the SSA. (YR-1996), (YR-1998), and (YR-2001) are linear time trends. All regressions use individual-level data and include year fixed effects and fixed effects for each combination of (AFQT-quintile)x(year), (year of birth)x(year), and (race)x(year). Standard errors, clustered on individuals, are reported in parentheses.

*** Significant at the 1 percent level.

** Significant at the 5 percent level.

* Significant at the 10 percent level.
