

## Disclosure Statement, Irem Guceri

“Effectiveness of fiscal incentives for R&D: quasi-experimental evidence”

This research was explicitly supported by a grant from the UK Economic and Social Research Council: grant ES/L000016/1 “The effects of business taxation on economic and social welfare: new insights from tax return data”. Irem Guceri is a British Academy-funded postdoctoral fellow at the Said Business School of the University of Oxford.

The paper draws on confidential tax return data provided by the UK tax authority, HMRC in its Datalab. HMRC review all outputs from the Datalab to ensure that no confidential information is revealed. This work contains statistical data from the Office for National Statistics which is Crown copyright and reproduced with the permission of the controller of HMSO and Queen's Printer for Scotland, made available for use by the HMRC Datalab. The HMRC bears no responsibility for the analysis of the statistical data or the opinions presented in this paper.

Because of the confidentiality of the data, we are unable to make the data publicly available. We are, however, allowed publication of our Stata .do files which generate the results. Researchers with access to the relevant datasets and permission from the HMRC may run our code to replicate our results.

The research forms part of the output of the Oxford University Centre for Business Taxation. The Centre receives funding from a number of sources. The main sources for the last three years have been:

- A grant from the UK Economic and Social Research Council: grant ES/L000016/1 “The effects of business taxation on economic and social welfare: new insights from tax return data”
- Another, larger grant from the Economic and Social Research Council: grant RES-060-25-0033, “Business, Taxation and Welfare”
- We have also received funding from the Nuffield Foundation grant ECO 41884 “Developing a business profit tax fit for the 21st Century”
- Donations from business, mainly members of the UK Hundred Group of companies. The following companies have made annual donations up to a maximum of £20,000 per year:

Alliance Boots  
AstraZeneca  
BAA  
BAE Systems  
Barclays  
BP  
British Sky Broadcasting  
Centrica  
Diageo  
ExxonMobil International Limited  
GlaxoSmithKline  
HSBC Holdings  
Intercontinental Hotels Group  
Lloyd's  
National Grid  
Old Mutual  
Pearson plc  
Reed Elsevier  
Rio Tinto  
Royal Dutch Shell  
RSA Insurance Group  
SABMiller  
Severn Trent  
Smith & Nephew

Tesco plc

The Centre has a clear policy of independence with respect to all sources of funding. The Centre's website states:

"The Centre for Business Taxation is an independent research centre of the University of Oxford, based at the Saïd Business School and drawing on the expertise of the Law Faculty and Economics Department as well as academics from other universities worldwide.

The Centre's research programme is determined on the basis of academic merit and policy relevance, and is the responsibility of the Director and the Centre's Steering Committee. Decisions on the research programme and the content of research are taken independently of the views of the Centre's donors and other funding agencies. All research carried out at the Centre is undertaken with a view to publication.

The Centre has no corporate views: views expressed in publications produced by the Centre are the responsibility of the authors. While Centre researchers may consult with donors and other external interested parties, final responsibility for the content and presentation of the research lies with the researchers in consultation with the Director and the Steering Committee."

This research was also based on a chapter of my doctoral dissertation, which was supported by two main funding sources. First, a doctoral studentship by the Oxford University Centre for Business Taxation, whose funding sources are as listed above. Second, a doctoral studentship from Argela, through the doctoral studentship agreement between Oxford University and Argela. Argela is a private company based in Turkey which is engaged in R&D activities. The studentship contract between Oxford University and Argela included a clause that ensured that the results of my doctoral research cannot be influenced by Argela (see below). None of the funders had the right to review the paper prior to its publication. Argela bears no responsibility for the analysis of the statistical data or the opinions presented in this paper.

The studentship agreement explicitly states (in its Clause 4.(a)) that: "Neither the University nor the Student undertake that the Project carried out under or pursuant to this Agreement will lead to any particular result, nor is the success of such work guaranteed."

This project does not include material that requires IRB approval.
