

“Evaluating the Economic Cost of Coastal Flooding”

by Klaus Desmet, Robert E. Kopp, Scott A. Kulp, David Nagy, Michael Oppenheimer, Esteban Rossi-Hansberg and Benjamin H. Strauss

Disclose Statement for Michael Oppenheimer

The author declares that he was a professor at Princeton University while researching and writing this paper. Princeton University provided the financial support for this research. During this period, he was also employed as a visiting professor at NYU and a science advisor at the Environmental Defense Fund (EDF), an advocacy and research organization. EDF has a broad interest in climate change and thus this relationship may bear the appearance of a conflict of interest. However, EDF had no influence on the research or writing of this paper and the subject of this paper was not discussed with EDF.

The author also serves as the paid Co-Editor-in-Chief of a journal, Climatic Change and also is Editor-in-Chief of its Letters section. The author serves on two not-for-profit boards, the Climate Science Legal Defense Fund and Climate Central. Neither is an advocacy organization so it is doubtful that either relationship would be considered to entail an actual or apparent conflict of interest.
