

“Quantifying Threshold Manipulation in the Presence of Rounding: The Case of Lead Monitoring in U.S. Drinking Water”

Disclosure Statement – David Keiser

The author declares that he has no relevant or material financial interests that relate to the research described in this paper. Keiser discloses that he received funding for this work through the National Institute on Aging of the National Institutes of Health award R01AG079914. He also discloses that he serves on the Science Advisory Board for the U.S. Environmental Protection Agency, where he has reviewed drinking water rules and regulations, including those pertaining to lead. For work not directly related to this paper, Keiser discloses that he has received recent funding for other research projects by the U.S. Environmental Protection Agency, the U.S. Department of Agriculture, and the National Science Foundation. Keiser was retained by Flint plaintiffs on two lawsuits seeking compensation for damages related to the Flint water crisis (Carthan, et al. v. Snyder, et al., no. 16-cv-10444-JEL-MKM and *In re* FTCA Flint Water Cases, Civil Case No. 4:17-cv-11218). Compensation for this work does not depend on the outcomes or opinions contained within this article.
