“Medical Care Spending and Labor Market Outcomes: Evidence from Workers' Compensation Reforms”

Seabury has received project funding from the California Commission on Health and Safety and Worker's Compensation for related work, which also provided support for the collection and access to the data. Seabury received consulting fees for work unrelated to this study from Precision Health Economics, and acknowledges partial support for this work from an unrestricted grant to the Department of Ophthalmology from Research to Prevent Blindness, NY, NY.

Powell received partial support from the NIA and the Bing Center for Health Economics for this project. The Bing Center has no vested interests in any specific results involving workers' compensation or health care policy.

No party has reviewed the results of this paper before circulation or submission.

The authors have no other relevant or material financial interests that relate to the research described in the paper.
