

# RESEARCH QUESTIONS

Human interactions affect almost every aspect in life

**Q1:** What is the empirical structure of human interactions?

**Q2:** What features may affect economic decisions?

**Q3:** Do human interactions generate returns, bring costs, or introduce biases?

## RAW DATA

**Startup 1-3 min pitch videos**

- Scraped from YouTube for 5 accelerators (e.g., Y Combinator, Techstars)

**Firm-level information**

- From Pitchbook and Crunchbase
- Status, industry, funding, employment

## EMPIRICAL DESIGN

**Two-Step Approach**

1. VC investment decisions on covariates

$$I(\text{invested}) = \beta X + \alpha + \epsilon$$

2. Startup outcomes on covariates

(conditional on VC invested)

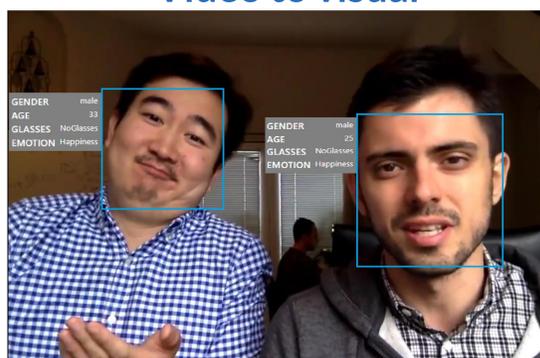

$$\text{outcomes} = \beta X + \alpha + \epsilon \text{ if } I(\text{invested}) = 1$$

## VIDEO PROCESSING

### Video to vocal

- Speaker diarization (matching voices with faces)
- Vocal emotion recognition

### Video to visual

- Extract faces via CV algorithms
- Facial emotion recognition

### Video to verbal

- ML: punctuation, speech2text
- Merge with LM finance dictionary
- Merge with NBS social psychology dict

# Human Interactions and Financial Investment: A Video-Based Approach

Allen Hu (Yale SOM, allen.hu@yale.edu)  
Song Ma (Yale SOM, song.ma@yale.edu)

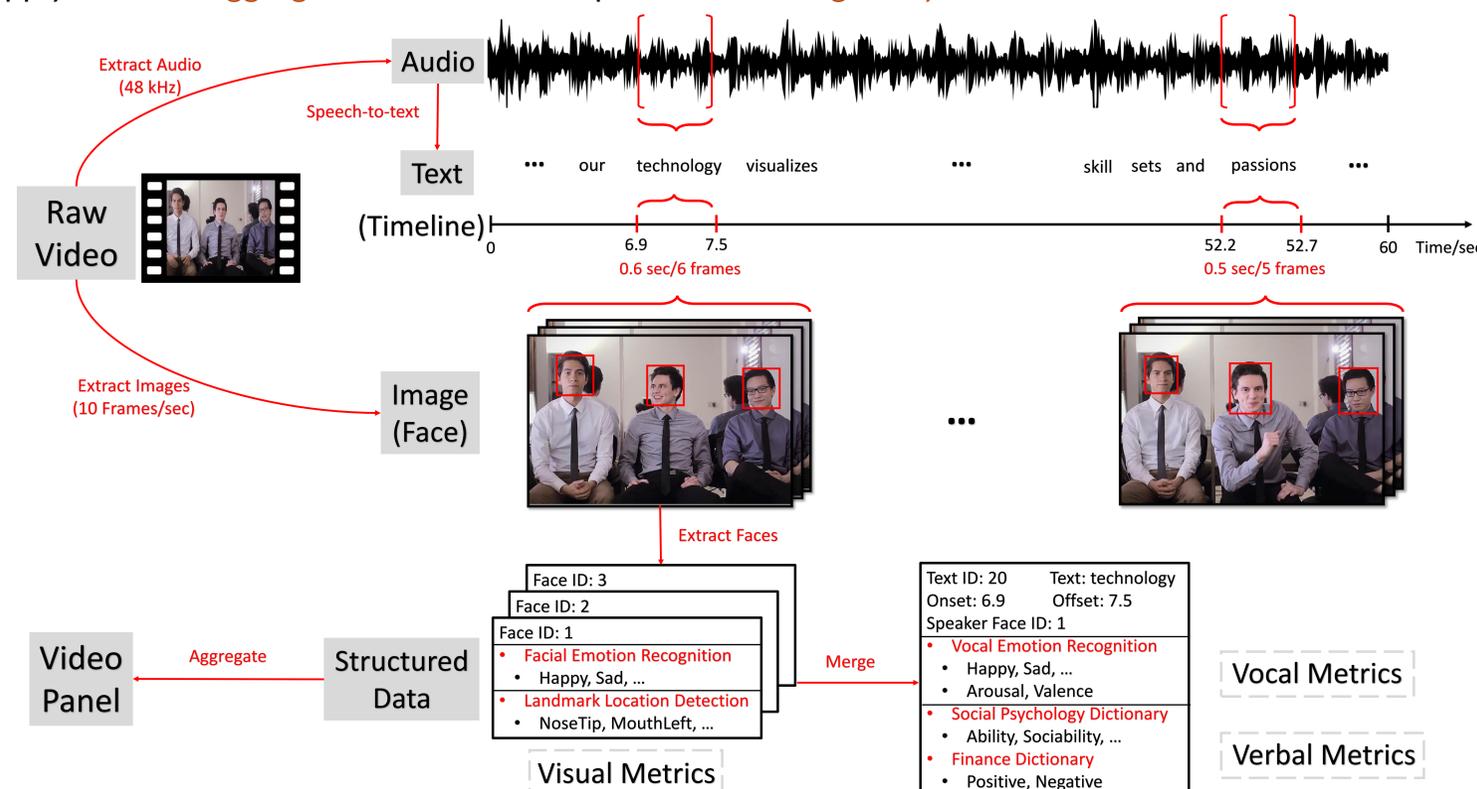

Take a picture to view the paper

We project **human interactions in videos** to **3V (visual, vocal, and verbal)** channels via **machine learning** and find the existence of **costly social biases**

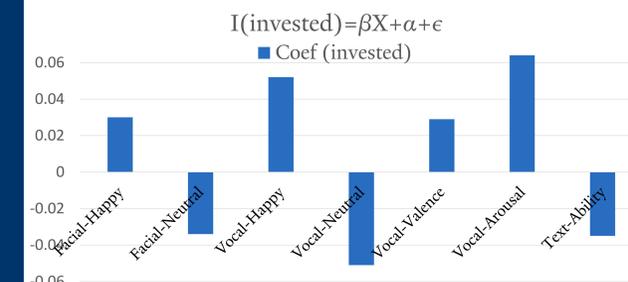

## VIDEO AS DATA

- Video data is **high-dimensional** (~600M dimensions) and **unstructured** (embedding sound waves and images)
- A **flexible** and **extendable** empirical framework with **interpretable** measures constructed by **ML algorithms**
- Identify entrepreneurs' genders, ages, emotions, and speech content within word-level time interval (<1 sec)
- Apply different **aggregation** methods to explore the **heterogeneity**

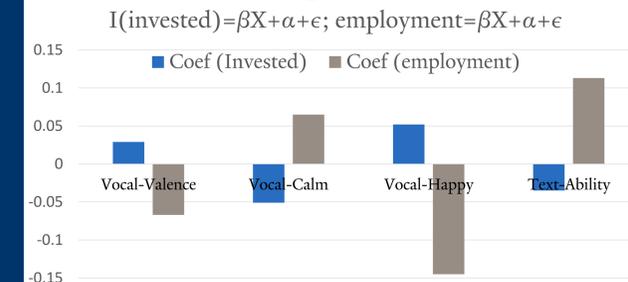

## RESULTS

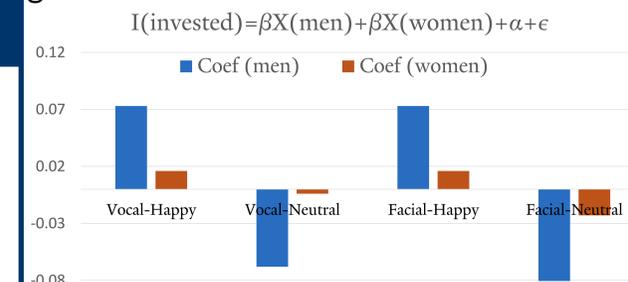

1. VC invests in happy, positive, and passionate teams

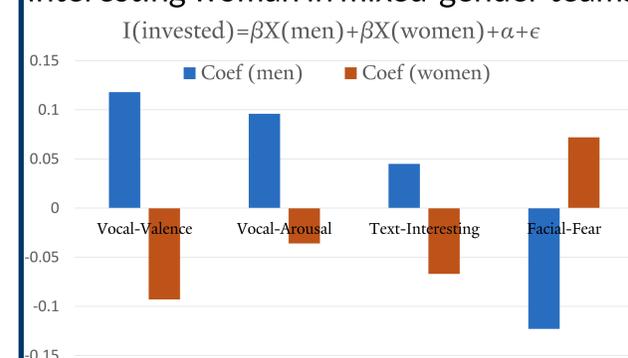

2. However, happy teams underperform if conditional on being invested

3. Women are often neglected in mixed-gender teams

4. Investors do not appreciate passionate/interesting woman in mixed-gender teams

## CONCLUSIONS

Human interactions affect economic decisions because...

**[X] "Know You Better"**

People extract useful information (Is he/she passionate about this project?)

**[✓] "Social Animals"**

People establish social perceptions (Is he/she socialable?/ Do I like him/her?)
